Obtaining accurate and safe fetal spiral electrode application is a critical skill in obstetrics. However, due to limited opportunities for hands-on training, many healthcare professionals struggle with this. Our training head for FSE application is designed to simulate real-life scenarios, allowing doctors, nurses, and midwives to refine their technique in a controlled, realistic environment.

Ready to level up your training?

Training Steps

1. Open the package and place the training head on a flat surface.

2. Open the Goldtrace[®] package and apply it to the training dummy, according to the IFU.

For further details, refer to the tutorial video.

The training head, featuring soft-touch material and lifelike anatomical details, is highly suitable for practising fetal spiral electrode use during intrapartum fetal monitoring, and clinical nursing skills.

Train with confidence using a realistic FSE Training Head.

- ✓ Enhances hands-on training for FSE application procedures.
- ✓ Helps improving confidence and technique.
- ✓ Suitable for hospitals, medical schools, and training programs.

Helps improving technique

No More Makeshift Tools!

Reusable & Durable

Latex free

Suitable for hospitals
